

A good plan is the basis for everything

Do you ask how much all this will cost? Surprisingly, not much. The determination to start is the most valuable aspect. It's not necessary to invest in special projects, it's much more effective to use smart solutions for projects you are already implementing. As part of the modification of public areas or the renovation and construction of public buildings, car parks, and gaming and sports zones.

We can help you plan and search for suitable measures for your city, and make decisions about the implementation based on precise calculations of their impact on the city's climate.

The public on your side

Heat and drought enjoy great media attention. They are part of people's daily conversations, and their impact concerns all of us.

Let's do something, so the cities don't burn.

LIFE Tree Check

...so the city doesn't burn!

www.lifetreecheck.eu

Does this sound familiar? The sun is leaning against the hot pavement, surrounding buildings are giving off heat and the heavy air won't move. Just walking down the street is a difficult task. You can't sleep at night, and you can't open the window during the day. The city heat soon becomes unbearable.

What's going on?

We are unwilling witnesses to the manifestations of an urban heat island. Asphalt, glass, concrete—the city is full of surfaces that are quickly heated up by the sun. It doesn't rain much, and when it rains there is nowhere for the water to seep into—so it doesn't cool the city down. Transportation, industry and all human activity create more and more heat, driving the temperature higher.

We are experiencing an increasing amount of tropical weather. According to scientists, by the end of the century the amount of hot days will double—twice as many sleepless nights and exhaustingly hot days!

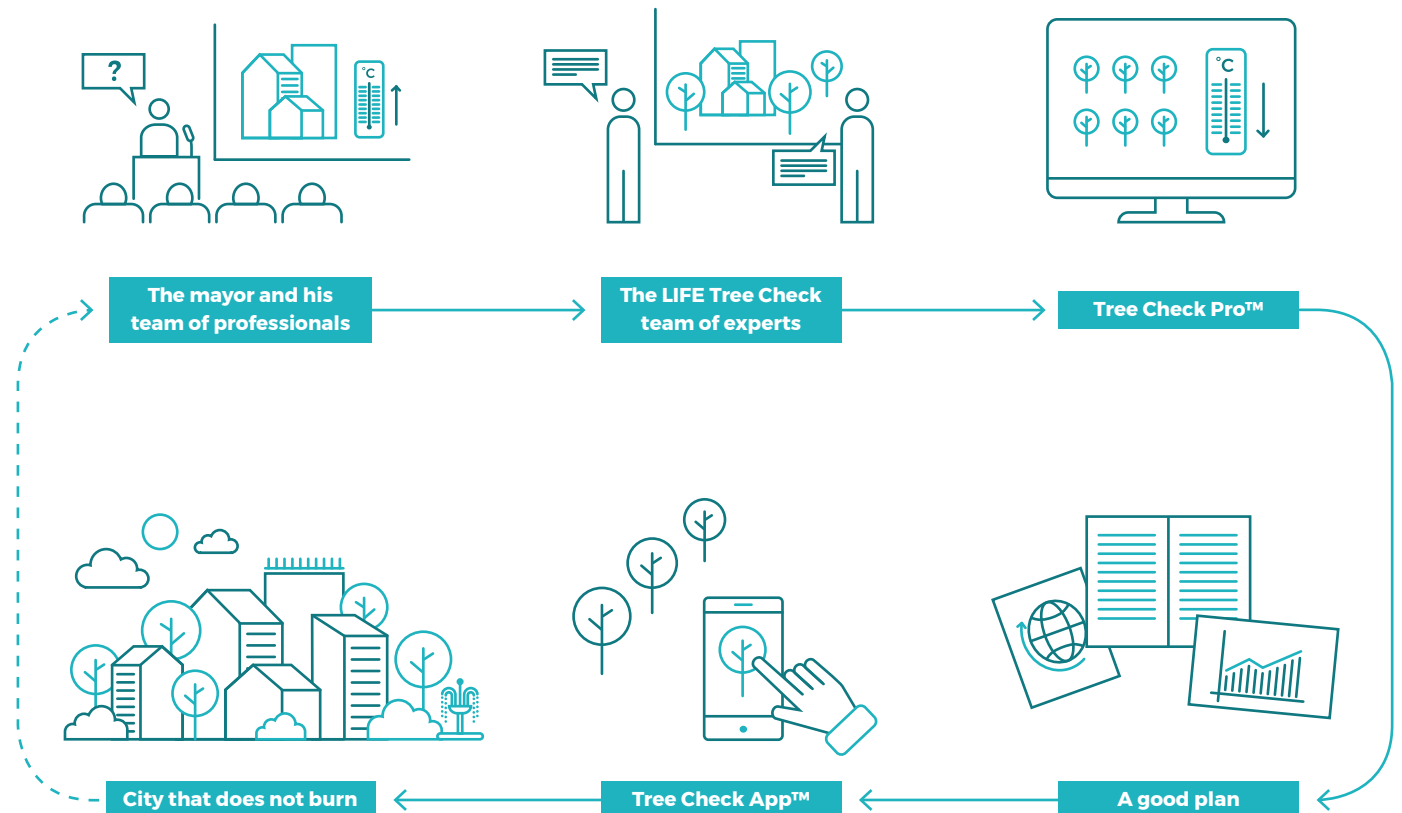

Is there something we can do?

We can't change the weather, but we can decide what our cities will look like. Energy-saving buildings, green facades and rooves. More trees, bushes, grass and water. Surfaces that don't get as hot. Areas that catch every drop of rain.

All this helps cool cities down. Creating pleasant places to live in. Would you like a city like that?

The LIFE Tree Check project knows how to achieve it!

The LIFE Tree Check team of experts is a unique combination of people with scientific knowledge, strategists and analysts, experts with practical experience in urban management and green infrastructure management, and communication specialists.

Tree Check Pro™ is an electronic online tool that can predict the impact of planned investments on a city's climate, enabling qualified decision-making about their appropriate form.

A good plan is a plan that can project measures for cooling the city into all strategies, investments and procedures where it is functional and effective.

Tree Check App™ is a mobile app that recognizes specific types of plants on the basis of a photograph, quantifies its contribution to the city's climate, and engages the public in urban greenery care in a fun way.
